

Setting up a prostate fusion biopsy practice

MR fusion biopsy allows specialists to provide optimized cancer diagnosis and treatment solutions to their patients. The KOELIS Trinity® system offers a simple workflow for all users and allows for efficient multidisciplinary communication among radiology, urology, and pathology.

Setting up a prostate fusion biopsy practice

The KOELIS Trinity[®] system provides efficient data flow that can integrate into individual practice workflows. The patient specific 3D-model is completed at each step of care and becomes a convenient tool to facilitate treatment options.
