

ProMap Lite™

The efficient radiology solution
for pre-fusion MRI annotation

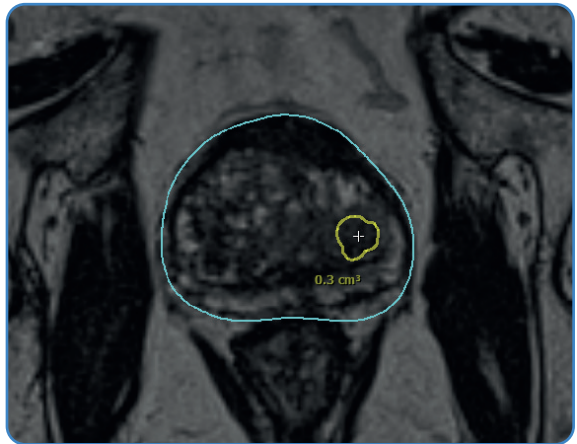

ProMap Lite™

The radiology software to efficiently annotate prostate MRI findings for fusion biopsies with Koelis Trinity®.

Efficient solution

Developed by KOELIS®, an international leader in MR/Ultrasound prostate fusion biopsy, ProMap Lite™ software leverages semi-automated 3D algorithms to contour the prostate and ROIs on the MR series with time efficiency.

Trinity®**
OBT Fusion®

Collaborative workflow

Your radiology expertise, first step to perform highly accurate prostate biopsies:

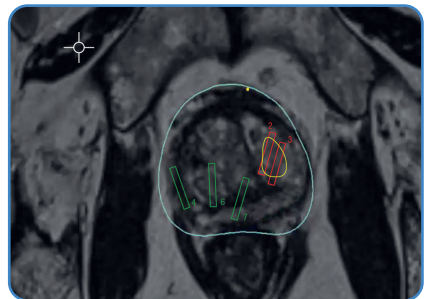

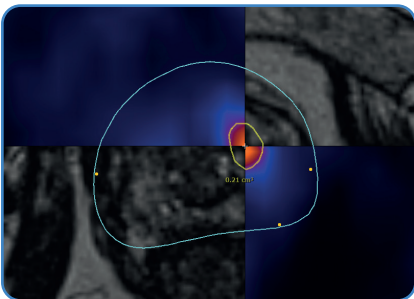

- > Annotate the suspicious areas in 3 dimensions
- > Send series ready to fuse with the urologist's ultrasound
- > Ensure to patients the optimal care they deserve

Seamless integration

ProMap Lite™ is quick to set up and has an extremely short learning curve:

- > Used in complement of your current visualization and reporting softwares
- > Compatible with your traditional radiology consoles and laptops
- > Communicate with your usual exchange tools such as PACS

Scalable software

ProMap Lite™ is also an ideal solution for expert level centers:

- > 3D biopsies map review and post procedure MRI fusions
- > PET images annotation for PET/Ultrasound fusion biopsies

|

We are pioneers and leaders
with an innovative 3D prostate mapping tool
used by physicians at all stages,
from diagnosis to treatment.
